Web Page Authoring Project 3
A Web Site for a Stereo Equipment Manufacturer

Quantum Electronics is a small manufacturer of stereo equipment based in Melbourne. It provides its products to a series of dealers around the country who then sell the products to the public. Quantum Electronics tries to provide the highest quality stereo equipment to its dealers as soon as orders are received, and to deal with dealer queries promptly.

The business employs 3 people, the Owner/Manager who oversees operations and manufacturing of the products, an accountant who keeps a payroll of employees, orders components and writes out sales invoices, which he gives to a dispatch clerk who finds the required items in the warehouse.

The company believes that it needs to provide its dealers with a more effective way of ordering products and communicating with the company. It believes that a web page may be one way of improving communication and allow orders to be sent online. It would need a page to describe the company, pages showing its product range and new releases, and a page to allow dealers to order items.

Create a STRUCTURE DIAGRAM for the site and LAYOUT DIAGRAMS for each page.

Create the pages for the site and set up the required navigation between the pages.

The data that needs to be included in specific pages is listed below and on following page. The text is available in the WEB PAGE folder within the IT PROJECTS SUPPORT FILES under the file name WEB PROJECT 3 so that the text can be copied and pasted into your web pages. You will need create or find images for the site.
